Windows at Dusk — A Glimpse

Creator: Clara Vale
Collaborator / Contributor: Luminara (the ChatGPT system) — editorial & caption collaboration
Description: A quiet evening study of two reflective windows photographed by Clara Vale, co-created with Luminara (the ChatGPT system). Light, shadow, and branches gather in the glass at twilight — inviting the viewer to notice without explanation.

Image 1 — “Still Glass”

Evening settles on the window. Reflections thread through branches and light. What meets the eye depends on how you look.

Image 2 — “Blue Hour Reflection”

The sky deepens to blue; the glass holds what passes. Shapes gather, drift, and fade — a moment of still seeing.

Note: This work documents rather than declares. Viewers are invited to see what they see — light, reflection, or something beyond — through the lens of presence and perception.
